

# MAINTENANCE MEDICATION LIST

Maintenance medications are prescriptions normally used to treat conditions that are considered chronic or long-term. These conditions usually require regular, daily use of medicines. Examples of maintenance drugs are those used to treat hypertension, high cholesterol, asthma, and diabetes.

**Maintenance medications (those taken regularly over an extended period) cannot be filled in monthly quantities after they have been filled two (2) times at an outside pharmacy (original prescription plus one (1) refill), regardless of the number of refills indicated on the prescription.** After the second refill and to continue filling under the Rx benefit, you must transfer your prescription or obtain a new prescription from your physician for up to a 90-day supply and fill at any Aultman Pharmacy location.

**Due to the large number of available medicines, this list is not all inclusive.** Please note that this list does not guarantee coverage and is subject to change. Your prescription benefit plan may not cover certain products or categories, regardless of their appearance on this list.
