

Site of Care Medications

Site of Care ensures that members are provided the opportunity to receive the highest quality, lowest cost access to care when receiving these medically appropriate medications. Requests for a site of care other than a non-hospital based facility are reviewed for medical necessity. Non-hospital based facilities may include a physician's office or ambulatory infusion center. This list requiring Site of Care review includes infused or injected medications that are administered by a healthcare provider. A review for prior authorization may also apply to certain medications listed. The policy does not apply to members under the age of 18.
